1. Introduction

This Operating Control Procedure (OCP) provides a comprehensive guide for using the ONEPWS AuditPro portal — an integrated Quality Management System (QMS) designed for conducting, tracking, and reporting internal quality audits across all departments of ONEPWS Pvt. Ltd.

The portal supports four international audit standards: AS9100 Rev D (aerospace quality), ISO 9001:2015 (quality management), ISO 14001:2015 (environmental management), and ISO 45001:2018 (occupational health and safety). Additionally, organizations can import their own custom checkpoints, which appear as a dedicated "ONEPWS Internal Checkpoints" section during audits.

1.1 Purpose

This document serves as a user manual that enables any employee — regardless of technical background — to understand and operate every feature of the AuditPro portal. It covers login procedures, audit planning and execution, findings management, CAPA workflows, report generation, data import/export, and system administration.

1.2 Scope

- All 18 departments of ONEPWS Pvt. Ltd.
- Internal audits aligned with AS9100D, ISO 9001, ISO 14001, and ISO 45001
- Custom internal checkpoints imported from the organization's audit history
- Finding lifecycle from logging to CAPA closure
- Role-based access for Admin, Auditor, Department SPOC, and Management Viewer

1.3 How to Access

Open the portal HTML file in any modern web browser (Chrome, Edge, Firefox, or Safari). No internet connection is required after the initial load — all data is stored locally in your browser. The portal is compatible with desktops, laptops, tablets, and mobile phones.

⚠ Do not clear your browser data (cache/cookies/local storage), as this will permanently delete all portal data. Always use the Export Backup feature before clearing browser data.

2. Login & Authentication

When you open the portal, you will see the login screen shown below. Enter your Login ID and Password, then click "Sign In."

LOGIN ACCOUNTS		
admin	Admin123!	Master Admin
rsharma	Audit@123	Auditor
agupta	Spoc@123	SPOC
mgmt	View@123	Viewer

Figure 2.1 — Login Screen with Demo Accounts

2.1 Default Login Accounts

The portal includes four pre-configured accounts. Your system administrator can create additional accounts or change passwords from the Admin Panel.

Login ID	Password	Role	Access Level
admin	Admin123!	Master Admin	Full access to all 14 sections
rsharma	Audit@123	Auditor	Conduct audits, log findings, review closures
agupta	Spoc@123	Dept SPOC	View own department findings, submit closures
mgmt	View@123	Mgmt Viewer	Read-only dashboard and reports

2.2 What Each Role Can Do

Master Admin

Has unrestricted access to every section of the portal. Can create, edit, and delete users, departments, auditors, and checkpoints. Can reset passwords, manage permissions, import/export data, merge team data, and perform a full system reset. The Admin can view all findings and CAPAs across all departments.

Auditor

Plans and executes audits. Logs findings during audit execution. Reviews closure evidence submitted by Department SPOCs and either accepts (closes the finding) or rejects it (reopens for further action). Cannot access the Admin Panel or Master Library editing features.

Department SPOC (Single Point of Contact)

Each department has one or more SPOCs responsible for responding to audit findings. The SPOC can only see findings and CAPAs related to their own department. Their primary responsibility is to submit closure evidence (including before-and-after photos) for each finding assigned to their department.

Management Viewer

Read-only access to the Dashboard, Analytics, Reports, and Findings sections. Cannot create audits, log findings, or submit closures. This role is designed for plant heads, quality directors, and management review participants who require oversight without editing capability.

 After logging in, your session persists even if you close and reopen the browser. You will remain logged in until you click the Logout button.

3. Portal Navigation

The portal has a fixed sidebar on the left showing all available sections grouped by category. The sections visible to you depend on your role — you will only see sections you have permission to access.

3.1 Sidebar Sections

Category	Section	Icon	Purpose
My Workspace	My Pending Tasks		Your personalized task list based on your role
Overview	Dashboard		Real-time compliance KPIs and department scorecards
Overview	Analytics		Detailed charts, severity distribution, and trends

Category	Section	Icon	Purpose
Audit	Planning		Schedule audits, select standards, assign auditors
Audit	Execution		View planned/completed audits, conduct active audits
Audit	Reports		Department-wise PDF/Excel audit reports
Compliance	Findings		Non-conformance register with search, filter, and sort
Compliance	CAPA Tracker		Corrective/preventive action lifecycle management
Compliance	Learnings		Knowledge base of root causes and preventive actions
Compliance	Master Tracker		Central view of all findings, CAPAs, and learnings
Master Data	Master Library		Departments, internal checkpoints, and auditors
Master Data	Bulk Import		Import findings, checkpoints, and learnings from Excel
Admin	Admin Panel		User management, permissions, and system settings
Help	OCP Manual		This document — the operating procedure guide

3.2 Top Bar Features

The top bar appears on every page and contains the following elements, from left to right:

- Page Title — Displays the name of the current section
- Date Range Filter — Two date pickers (From and To) that filter all data views by date range. Click "Clear" to remove the filter.
- Print Button () — Prints the current page in a clean, paper-ready format
- Action Button — A context-sensitive button that performs the primary action for the current page
- Notification Bell () — Displays the unread notification count. Click to view recent alerts.
- Logout Button — Ends your session and returns to the login screen

4. Dashboard

The Dashboard is the first screen displayed after logging in. It provides a real-time overview of your organization's quality compliance status, calculated entirely from actual audit data.

Figure 4.1 — Executive Dashboard

4.1 KPI Cards

The top row displays four key performance indicators:

- **Compliance Score** — Percentage of findings that have been closed out of total findings. Color-coded: green ($\geq 80\%$), amber ($\geq 60\%$), red ($< 60\%$).
- **Open Findings** — Total number of findings not yet closed, with a count of critical findings displayed below.
- **CAPA Closure Rate** — Tracks corrective action completion against a 90% target.
- **Completed Audits** — Total number of audits submitted to date.

4.2 Department Scorecard

A table showing every department with findings, ranked by compliance score. Each department's score is calculated as: $100 - (\text{critical findings} \times 15) - (\text{major findings} \times 5) - (\text{minor findings} \times 2)$. Departments are color-coded: green ($\geq 90\%$ Compliant), amber ($\geq 75\%$ At Risk), or red ($< 75\%$ Non-Compliant).

4.3 Findings by Clause

A visual display showing the number of non-conformances found per standard clause (e.g., §7, §8, §10). This helps identify which clauses are generating the most findings and require focused attention. The counts are computed dynamically from your actual findings data.

All dashboard metrics update automatically whenever findings are logged, closed, or imported. There is no need to manually refresh — simply navigate away and return.

5. Audit Planning

The Planning section is where you schedule new audits. You can plan multiple audits at once and execute them one by one from the Execution section.

Figure 5.1 — Audit Planning with Calendar and Create Audit Form

5.1 How to Create a New Audit

- Select a Department from the dropdown (e.g., Stores, Production, Quality)
- Select one or more Audit Standards by clicking the colored chips: AS9100 Rev D (red), ISO 9001 (blue), ISO 14001 (teal), ISO 45001 (amber). You may also select "ONEPWS Internal" (purple) to include your organization's custom checkpoints.
- Select an Auditor from the dropdown (only active auditors are listed)
- Set the Audit Date (defaults to today) and select the Audit Type
- Optionally click "Preview Full Checklist" to review all questions that will be generated
- Click "Create Audit & Generate Checklist" to finalize

⚠ Creating an audit does NOT immediately start it. The audit is added to a Planned Audits Queue. You can create multiple audits in batch and then go to the Execution section to start them one by one.

5.2 Audit Standards Explained

Standard	Color	Coverage
AS9100 Rev D	Red	Aerospace quality — traceability, FAI, configuration management, special processes
ISO 9001:2015	Blue	Quality management — customer focus, process approach, continual improvement
ISO 14001:2015	Teal	Environmental — waste, emissions, energy, legal compliance
ISO 45001:2018	Amber	OH&S — hazard identification, risk assessment, PPE, emergency preparedness
ONEPWS Internal	Purple	Your custom checkpoints imported via Bulk Import

5.3 Calendar

The calendar shows the current month with today's date highlighted. Use the ‹ and › buttons to navigate between months. The calendar is for reference only — actual audit scheduling is performed through the Create Audit form.

6. Audit Execution

This is where you conduct actual audits. The Execution section has two views: the Audit Queue (when no audit is active) and the Active Audit view (when an audit is in progress).

Figure 6.1 — Execution Section Showing Planned and Completed Audits

6.1 Audit Queue

When you open the Execution section, you will see three stat cards (Planned, In Progress, Completed) followed by a search bar with a status filter. Below that:

- Planned Audits — Each planned audit displays the department, auditor, date, standards, and question count. Click "► Start" to begin the audit or "X" to remove it from the queue.
- Completed Audits — Each completed audit shows the department, reference number, date, and findings count. Click "📄 View Report" to see the full completion report with all checklist results.

6.2 Conducting an Active Audit

Figure 6.2 — Active Audit with Checklist Questions

After clicking "► Start" on a planned audit, you enter the active audit view:

Progress Header

Displays the department name, audit type, auditor, date, reference number, selected standards as colored badges, and a progress bar showing how many questions have been answered.

Section Navigation (Left Panel)

Each audit standard generates its own section of questions. Click any section to jump to it. Each section displays a completion percentage and a standard badge. The "First Unanswered" button jumps to the next unanswered question.

Checklist Questions (Right Panel)

Each question is displayed as a card with the clause reference, question text, risk rating (stars), and an auditor tip. For each question, select one of four responses:

- ☒ Yes / Compliant — The requirement is met. The card turns green.
- ☒ No / Non-Compliant — The requirement is NOT met. The card turns red and a Finding Modal automatically opens for you to log a non-conformance.
- N/A — The requirement does not apply to this department or process.
- ☒ Skip — You wish to return to this question later.

💡 Answers are auto-saved every 30 seconds. You can also click "💾 Save" at any time. If you close the browser and return, your progress will be restored.

Logging a Finding

When you click "✗ No," a Finding Modal appears where you enter:

- Severity — Critical, Major, Minor, or Observation
- Finding Description — What was observed (be specific and factual)
- Immediate Correction — What was done on the spot
- Root Cause Category — Man / Machine / Method / Material / Measurement / Environment
- Evidence Photos — Upload before-and-after photos (automatically compressed to save storage)

Submitting the Audit

After answering all questions, the last "Next Section" button changes to "✓ Review & Submit." Clicking it will:

- Validate that all questions are answered (unanswered questions must be marked N/A)
- Save all findings to the Findings Register with auto-generated reference numbers
- Record the complete audit (all answers, notes, and evidence) in the Completed Audits history
- Update the department's last audit date
- Display a full Audit Completion Report with compliant/non-compliant results and a PDF download button

7. Reports

The Reports section generates department-wise audit reports. Each department card shows its compliance score, finding counts, and buttons to download PDF or Excel reports.

7.1 Using Reports

- Click any department card to see a detailed preview
- The preview displays the Full Audit Checklist Results table from the latest completed audit — every question with its result (Compliant, Non-Compliant, N/A, or Skipped)
- Below the checklist, a Non-Conformances summary table shows all findings
- Evidence photos from the audit are displayed at the bottom
- Click " Download PDF" for a formatted report or " Download Excel" for a spreadsheet format

7.2 Standards Filter

At the top of the Reports page, colored chips allow you to filter by audit standard. Only audits conducted under the selected standards will appear in the reports. This is useful when generating a report specifically for an ISO 14001 surveillance audit, for example.

7.3 PDF Report Contents

The downloaded PDF includes:

- ONEPWS-branded header with department name, SPOC, date, and standards
- Full checklist table with question, clause, result, and observations (full text — no cropping)
- Non-conformances summary with severity and status
- Embedded evidence photos

8. Findings Register

The Findings Register is a searchable, sortable, and paginated table of all non-conformances across the organization. Findings are added either by logging them during an audit or by importing them from Excel via the Bulk Import section.

8.1 Searching and Filtering

- Free Text Search — Type any keyword to search across all fields (reference, department, description, clause)
- Department Filter — Select a specific department from the dropdown
- Severity Filter — Filter by Critical, Major, or Minor
- Status Filter — Filter by Open, Delayed, Pending Review, or Closed

- Click "Clear" to reset all active filters

If you are logged in as a Department SPOC, the department filter is automatically set to your department. You will only see findings related to your department.

9. CAPA Tracker

CAPA stands for Corrective and Preventive Action. Every finding logged during an audit becomes a CAPA that must be resolved. The CAPA Tracker manages the full lifecycle from logging to closure.

Figure 9.1 — CAPA Tracker with Stepper and Closure Evidence

9.1 CAPA Lifecycle

Each CAPA passes through four stages, shown as a visual stepper at the top of the detail view:

Stage	Color	Who Acts	What Happens
1. Logged	Gray	Auditor	Finding is logged during audit execution
2. In Progress	Amber	SPOC	SPOC investigates root cause and implements corrective action
3. Pending Review	Purple	SPOC → Auditor	SPOC submits closure evidence; Auditor reviews it
4. Closed	Green	Auditor/Admin	Auditor accepts the closure; finding is verified and closed

9.2 Submitting Closure (SPOC)

- Navigate to the CAPA Tracker and locate your department's open findings
- Click the finding to view its details
- Click "📄 Submit Closure"
- Enter the Closure Evidence text describing the corrective actions taken
- Upload before-and-after photos as proof

- Click "Submit Request" — the status will change to "Pending Review"

9.3 Reviewing Closure (Auditor/Admin)

- Navigate to the CAPA Tracker
- Locate findings with "Pending Review" status
- Click "🔍 Review Closure"
- Review the evidence text and photos
- Click "☑ Accept & Close" to verify and close the finding, OR
- Click "✗ Reject & Reopen" to return it to the SPOC with comments

10. Master Library

The Master Library is the single source of truth for organizational data. It contains three tabs:

10.1 Departments

Lists all 18 departments with their code, name, SPOC, risk level, audit frequency, and last audit date. The Master Admin can add, edit, or delete departments.

10.2 Internal Checkpoints

This tab displays all custom checkpoints that have been added manually or imported via Bulk Import. These are your organization's own audit questions that go beyond the standard ISO/AS9100 checkpoints. When you select "ONEPWS Internal" during audit planning, these checkpoints are included as a separate section in the audit.

⚠ *Deleting a checkpoint removes it from future audits but does NOT affect completed audit reports — those retain their own copy of the checklist.*

10.3 Auditors

Lists all auditors with their employee ID, certifications, specialization, email, and status. Only active auditors appear in the Planning section dropdowns.

11. Bulk Import

The Bulk Import section allows you to upload Excel (.xlsx) or CSV files to import large volumes of data at once.

Figure 11.1 — Bulk Import with History and Export Options

11.1 Import Types

Type	Purpose	Required Excel Columns
Findings	Import historical NCs into the Findings Register	ID, Department, Description, Severity, Clause, DueDate, Status
Learnings	Import lessons learned into the Learnings Repository	Title, Department, Severity, Clause, Root Cause, Preventive Action
Custom Checkpoints	Import audit questions into the Master Library	Question, Clause, Weight (1–5), Type, Department, Tip

11.2 Step-by-Step Import Guide

- Select the Import Type from the dropdown
- Click "Download Template" to obtain a sample Excel file with the correct columns
- Fill in your data in the template
- Drag and drop the file onto the upload area (or click to browse)
- Review the import log for any errors

💡 For the "Department" column, you can use either the department name (e.g., "Stores") or the department code (e.g., "STR"). The system automatically matches both formats.

💡 If your Excel file has dates stored as numbers (e.g., 45777), the system automatically converts them to proper date values.

11.3 Import History

Below the import area, the Import History section shows every past import with its filename, type, record count, and timestamp. For each entry you can:

- 📄 Download — Save the import log details as a JSON file
- 🗑️ Delete (Admin only) — Removes the log AND removes the imported records from the system. Imported checkpoints are removed from the Master Library and will not appear in future audits. Completed audit reports are not affected.

12. Admin Panel

The Admin Panel is restricted to the Master Admin role and provides full control over users, permissions, and system settings.

Figure 12.1 — Admin Panel Users Tab

12.1 Users Tab

Displays all users with their login ID, role, department, and status. The following actions are available per user:

- Edit — Change name, login ID, password, role, department, or email
- Reset Password — Set a new password for the user (minimum 6 characters)
- Deactivate/Activate — Temporarily disable a user's login without deleting their account
- Delete — Permanently remove a user (you cannot delete your own account)

When you change a user's name, it automatically updates across the Auditors list and all visible sections.

12.2 Permissions Tab

Displays an interactive matrix of all sections versus all roles. Check or uncheck boxes to grant or revoke access to specific sections for each role. Admin permissions cannot be modified (always full access).

12.3 System Tab

Contains system-wide toggle switches (Email Notifications, Auto-escalation, etc.) and:

- Reset All Data (Password Required) — Prompts for the Master Admin password, then requests double confirmation before permanently deleting all data. Use this at the start of a new financial year to clear test or outdated data.
- Export Full Backup — Downloads a complete .json file containing all users, departments, auditors, checkpoints, findings, learnings, completed audits, and import logs.
- Import & Merge Team Data — Upload a .json backup file from another team member's portal. The system deduplicates and merges all data into your master portal.

⚠ Always download a backup BEFORE performing a full reset. You can re-upload the backup later if needed.

13. Data Backup & Team Collaboration

13.1 Backup Workflow

- Go to Admin Panel → System
- Click "📦 Export Full Backup"
- Save the downloaded .json file in a secure location
- This file contains ALL your data — findings, audits, checkpoints, users, and more

13.2 Team Collaboration

If team members use separate copies of the portal (e.g., on different laptops for field audits), they can share their data with the Master Admin:

- Team member: Go to Admin Panel → System → Export Full Backup
- Team member: Send the .json file to the Master Admin
- Master Admin: Go to Admin Panel → System → Import & Merge Team Data
- Master Admin: Upload the .json file
- The system automatically merges new findings, checkpoints, learnings, and completed audits without creating duplicates

13.3 Year-End Reset

- Export a full backup of the current year's data
- Store the backup file securely
- Go to Admin Panel → System → Reset All Data
- Enter the Master Admin password when prompted
- Confirm the reset
- The portal restarts fresh with default departments and users, ready for the new year

14. Quick Reference Card

Task	Steps
Create an audit	Planning → Select department, standards, auditor, date → Create Audit
Start an audit	Execution → Find planned audit → Click ► Start
Log a finding	During audit execution, click ✖ No → Fill in finding details → Save
Submit an audit	Answer all questions → Click ✓ Review & Submit
Submit closure (SPOC)	CAPA Tracker → Select finding → Submit Closure with evidence
Review closure (Auditor)	CAPA Tracker → Pending Review → Accept or Reject
Download PDF report	Reports → Click department card → Download PDF

Task	Steps
Import checkpoints	Bulk Import → Select "Custom Checkpoints" → Upload Excel
Export all data	Admin Panel → System → Export Full Backup
Reset password	Admin Panel → Users → Click  → Enter new password
Full system reset	Admin Panel → System → Reset All Data → Enter admin password
Print a page	Click  button in top bar → Print dialog opens
View audit report	Execution → Completed Audits → Click  View Report
Merge team data	Admin Panel → System → Import & Merge Team Data → Upload .json

— End of Document —
